SIP Display

The possible areas of application for SIP Displays are the practically **endless**. Wherever up-to-date information has to be depicted **quickly, currently** and with **intensive light**, the new TFT-Displays from Convar™ are in their element. The well-conceived design, **compact type of construction** and **intergrated software** make the use the SIP Displays child´s play.

With the **SIP Wireless Modul**, all SIP Displays from Convar™ can be intergrated into a Wireless LAN with just one single hand operation. This expends the range of applications for the for the new displays significantly. No matter whether you wish to use the SIP Displays for advertising, displaying information or as a digital picture frame.

SIP Displays are available in various sizes from very small, such as **2.4 inches**, to as large as a **46 inch Display**. All displays are equipped with the **SIP Interface** from Convar™ and are therefore available as **Plug´n Play Solutions**. Simply connect the network cable or the SIP Wireless Adapter and you are ready to go.
